Course Objectives

- To develop full stack applications with clear understanding of user interface, business logic and data storage.
- To design and develop user interface screens for a given scenario
- To develop the functionalities as web components as per the requirements
- To implement the database according to the functional requirements
- To integrate the user interface with the functionalities and data storage.

List of Experiments:

- 1. Develop a portfolio website for yourself which gives details about yourself for a potential recruiter.
- 2. Create a web application to manage the TO-DO list of users, where users can login and manage their to-do items
- 3. Create a simple micro blogging application (like twitter) that allows people to post their content which can be viewed by people who follow them.
- 4. Create a food delivery website where users can order food from a particular restaurant listed in the website.
- 5. Develop a classifieds web application to buy and sell used products. rest api

with node

- 6. Develop a leave management system for an organization where users can apply different types of leaves such as casual leave and medical leave. They also can view the available number of days.
- 7. Develop a simple dashboard for project management where the statuses of various tasks are available. New tasks can be added and the status of existing tasks can be changed among Pending, In Progress or Completed.
- 8. Develop an online survey application where a collection of questions is available and users are asked to answer any random 5 questions
- 9. Create your Own Web Application
- 10. Mini Project

Text Books:

- 1. Amos Q. Haviv, MEAN Web Development,2nd Revised edition,Packt Publishing
- 2. Ethan Brown, Web Development with Node and Express, Oreilly

Reference Books:

1. Colin J Ihrig , Adam Bretz Full Stack JavaScript Development With MEAN,FirstEdition
